ENDLESS HOOPS

# INFINET V4.0

## The Court Starts Here.

Infinet V4.0 is an innovative hoop and net designed and engineered for high-traffic, outdoor courts. It helps schools, parks, and communities turn netless rings and high-maintenance courts into durable, playable spaces. This high-performance net provides a real basketball experience on any public court. Installed across Australia, Europe, and the USA, Infinet proves that smart infrastructure transforms empty courts into active spaces.

### Why it matters:

In many municipalities, bare basketball hoops (no net) are often the only option to minimise maintenance, vandalism, theft or injury. However a bare hoop is not ideal for the user, resulting in underutilised public spaces. Infinet delivers the 'swish' to public courts. This Australian Made innovation is more than a net—it's an invitation to play.

**Built to last** – Engineered for daily play and minimal maintenance.

**Feels right** – Feedback you can hear and feel and as close to a net as you can get.

**Sustainable by design** – Recyclable, repairable, and made locally in Australia.

**Fits most** – Universal compatibility with existing backboards.

**Patent Pending** - Design protected innovation.
